

YU-TP18

BEST VALUE IN THE WORLD OF CUTTING TOOLS

FOR TITANIUM, STAINLESS STEEL AND ALLOY STEELS :

**TOUGH MATERIALS?
TAKE IT ON WITH TITANOX**

TitaNox Power

INDUSTRY-LEADING SOLID CARBIDE END MILLS

**HIGH-PERFORMANCE
MACHINING MADE EASY:**

- Variable Helix and Pitch
- 4 Flute and 5 Flute
- Square End, Chamfer and Radius
- Standard and Extended Length
- Inch and Metric Sizes

Take It On With

TitaNox Power

HIGH-PERFORMANCE MACHINING MADE EASY.

- Titanium
- Stainless Steel
- Alloy Steels

4-Flute

5-Flute

If you've been looking for a superior carbide end mill that won't back down when the going gets tough, it's time you look at TitaNox.

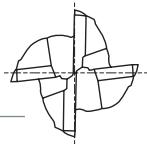

The TitaNox line is built to take on titanium, stainless steel, alloy steels, and more. With a choice of 4- and 5-flute designs and extra-rigid high-speed performance, TitaNox makes the perfect match for aerospace, power generation and medical applications.

TitaNox — Nothing Cuts Better.

With more choices in high-performance carbide end mills, YG-1 is the undisputed leader in end mill offerings. And with the TitaNox line, you have a full selection of extremely durable end mills built to take on the toughest materials in the business. From titanium to stainless steel and more—TitaNox rules. In either 4-flute or 5-flute configurations you get:

- ▶ YG-1 advanced coating for better wear resistance
- ▶ Better thermal stability
- ▶ Optimized edge design provides excellent performance in heavy cutting applications
- ▶ Excellent performance in difficult-to-machine materials
- ▶ Perfect solution for aerospace, power generation and medical applications
- ▶ Premium grade substrate for longer tool life

TitaNox Power 4-FLUTE DOUBLE CORE END MILLS

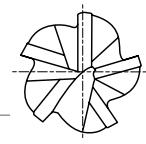

Let the Chips Fly.

For heavy cutting in slotting and profiling applications, our true double-core design provides faster chip evacuation and improved dimensional stability. Experience what a difference double-core design can make in your operation.

- ▶ Highly rigid double core adds stability and improves rigidity
- ▶ Unique 4-flute design provides excellent chip evacuation
- ▶ Variable flute design featuring multiple helix helps increase performance, reduce vibration and eliminate chatter

TitaNox Power 5-FLUTE END MILLS

Strong Performance — Right to the Finish.

These new 5-flute end mills are built to handle high-speed machining with fine finishing ability.

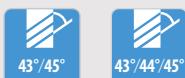

- ▶ 5-flute multiple helix design for fast, fine finishing in tough materials
- ▶ Multiple-helix geometry delivers smooth cutting with reduced chatter
- ▶ The perfect choice for profiling, finishing, peel milling operations and more

4-FLUTE

Our 4-Flute Double-Core Design Has One Purpose – Remove Material Faster.

With an extremely innovative 4-flute geometry, the TitaNox double-core end mill with advanced coating is built to not only survive but thrive in tough materials like titanium, stainless steel and more.

How Our 4-Flute Double-Core Design Can Cut It Where Others Can't.

Whether in profiling or slotting conditions, the TitaNox double-core design takes end milling titanium and other tough metals to a new level. With our super-rigid, heat resistant design featuring an innovative large gullet configuration, the TitaNox can cut it where single-core designs can't. With outstanding chip evacuation and the added ability to maneuver in tough materials, the TitaNox double-core end mills can combine heavy profiling and slotting in the same move—without vibration or chip packing.

▲ Thin-core designs allow aggressive cutting at first, but are soon slowed down due to excessive vibration, and often break.

▲ Thick-core designs provide enhanced stability but don't deliver enough chip evacuation, which can often lead to catastrophic failure.

▲ The TitaNox double-core design provides the best of both worlds—excellent chip evacuation combined with tool rigidity—to ensure stability, cut after cut. All this, plus quiet, vibration-free operation.

▲ The illustration above detailed along the X-X' axis shows how the 4-flute design starts the cut with aggressive chip evacuation. The Y-Y' axis shows how the double core comes into play, providing perfect slotting operations through its extra-rigid double-core design.

Super-Stable, Super-Performing, Super-Productive.

▲ For smooth, effortless profiling, the double-core design provides extremely stable cutting for increased productivity. No other end mill performs better in tough cutting conditions.

▲ Switch from profiling to slotting without excessive vibration without loading up. TitaNox double-core design pushes productivity higher in tough-to-mill materials.

▲ Other 4-flute single-core tools can load up in heavy axial depths of cut and break, as shown in the illustration above.

▲ The TitaNox super-rigid design and large gullet configuration provide excellent chip evacuation in titanium.

The YG-1 Technical Center provides turnkey custom-engineered tooling solutions.

Bring us your special orders. The YG-1 Technical Center is your one-stop center for all your tool-making needs. With state-of-the-art manufacturing assets, including a full assortment of top-of-the-line CNC stations, multiple high-performance grinding and milling machines, plus flexible programming testing modules, the YG-1 Tech Center gives you a turnkey solution to tool design, testing and manufacturing. ▼

Our Advanced Coating cuts faster—and lasts longer.

Compared to other competitive coatings currently on the market, YG-1's new advanced coating brings you the best of both worlds—increased tool hardness and higher speed performance. It all adds up to increased productivity in tough materials, and longer tool life. But what really sets our advanced coating apart is how it makes the TitaNox line the best value around in cutting tools — just another way YG-1 adds more value for less.

Why Peel Milling Appeals To Our 5-Flute TitaNox Design

For peel milling applications, the 5-flute Titanox is the preferred choice of the pros. Why Titanox? First off, the raw power of its 5-flute corner radius design provides seemingly effortless performance in materials ranging from stainless to titanium. Secondly, unlike slotting operations that push through materials, the high-speed cutting ability of the Titanox 5-flute design provides precise cutting to produce an ultra-fine finish, pass after pass.

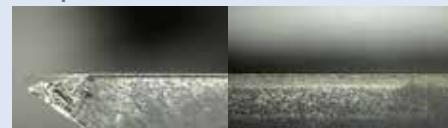

5-Flute Multiple Helix End Mills vs. Two Competitors

Cutting Conditions			
Milling Method	Down & Side Cutting	Feed	15.669 in./min.

NEXT PAGE ►

- NOTES:**
- Maximum recommended depth shown
 - Finish cuts typically require reduced feed rates and/or higher spindle speed, with radial width of 2% x D1 or less
 - Feed to be reduced by approximately 50% if L.O.C.(length of cut) is over 3xD
 - Reduce speed and feed recommendations for materials harder than listed
 - Recommendations above are based on ideal conditions.

Adjust parameters accordingly for smaller taper machining centers or less rigid conditions

NOTES:

- Maximum recommended depth shown
 - Finish cuts typically require reduced feed rates and/or higher spindle speed, with radial width of 2% x D1 or less
 - Feed to be reduced by approximately 50% if L.O.C.(length of cut) is over 3xD
 - Reduce speed and feed recommendations for materials harder than listed
 - Recommendations above are based on ideal conditions.
- Adjust parameters accordingly for smaller taper machining centers or less rigid conditions
